a Go package for presentations

---

## DECK: a package for presentations

Deck is a package written in Go

That uses a singular markup language

With elements for text, lists, code, and graphics

All layout and sizes are expressed as percentages

Clients are interactive or create formats like PDF or SVG

Servers use a RESTful API to list, upload, stop, start, remove decks

Elements

# text element

Hello, World (plain text)

A block of text, word-wrapped to a specified width.  
You may specify the size, font, line spacing, color,  
and opacity.

```
package main

import "fmt"

func main() {
    fmt.Println("hello, world")
}
```

Portrait

A template for a percent grid. It features a 10x10 grid of squares. The horizontal axis (top) is labeled with numbers 10, 20, 30, 40, 50, 60, 70, 80, and 90. The vertical axis (left) is labeled with numbers 10, 20, 30, 40, 50, 60, 70, 80, and 90. The text "Percent Grid" is centered in the middle of the grid.

## Output

So, the next time you're about to  
make a subclass, think hard and ask  
yourself

what would Go do

Andrew Mackenzie-Ross, <http://pocket.co/sSc56>

Python and Ruby programmers come to Go because they don't have to surrender much expressiveness, but gain performance and get to play with concurrency.

Less is exponentially more

You must not blame me if I do talk to the clouds.

FOR, LO,

the winter is past,

the rain is over and gone;

The flowers appear on the earth;

the time for the singing of birds is come,

and the voice of the turtle is heard in our land.
