

Deck

a Go package for presentations

DECK: a package for presentations

Deck is a package written in Go

That uses a singular markup language

With elements for text, lists, code, and graphics

All layout and sizes are expressed as percentages

Clients are interactive or create formats like PDF or SVG

Servers use a RESTful API for list, upload, stop, start, remove

Elements

Hello, World

A block of text, word-wrapped to a specified width.
You may specify size, font, color, and opacity.

```
package main
import "fmt"
func main() {
    fmt.Println("Hello, World")
}
```

<text> . . . </text>

bullet

Markup and Layout

Start the deck

```
<deck>
```

Set the canvas size

```
<canvas width="1024" height="768" />
```

Begin a slide

```
<slide bg="white" fg="black">
```

Place an image

```
<image xp="70" yp="60" width="256" height="179" name="work.png" caption="Desk"/>
```

Draw some text

```
<text xp="20" yp="80" sp="3" link="http://goo.gl/Wm05Ex">Deck elements</text>
```

Make a bullet list

```
<list xp="20" yp="70" sp="2" type="bullet">
```

```
<li>text, list, image</li>
```

```
<li>line, rect, ellipse</li>
```

```
<li>arc, curve</li>
```

End the list

```
</list>
```

Draw a line

```
<line xp1="20" yp1="10" xp2="30" yp2="10" />
```

Draw a rectangle

```
<rect xp="35" yp="10" wp="4" hr="75" color="rgb(127,0,0)" />
```

Draw an ellipse

```
<ellipse xp="45" yp="10" wp="4" hr="75" color="rgb(0,127,0)" />
```

Draw an arc

```
<arc xp="55" yp="10" wp="4" hp="3" a1="0" a2="180" color="rgb(0,0,127)" />
```

Draw a quadratic bezier

```
<curve xp1="60" yp1="10" xp2="75" yp2="20" xp3="70" yp3="10" />
```

End the slide

```
</slide>
```

End of the deck

```
</deck>
```

Anatomy of a Deck

Deck elements

- text, list, image
- line, rect, ellipse
- arc, curve

Desk

Text and List Markup

Position, size

```
<text xp="..." yp="..." sp="...">
```

Block of text

```
<text ... type="block">
```

Lines of code

```
<text ... type="code">
```

Attributes

```
<text ... color="..." opacity="..." font="..." align="..." link="...">
```

Position, size

```
<list xp="..." yp="..." sp="...">
```

Bullet list

```
<list ... type="bullet">
```

Numbered list

```
<list ... type="number">
```

Attributes

```
<list ... color="..." opacity="..." font="..." align="..." link="...">
```

Common Attributes for text and list

<code>xp</code>	horizontal percentage
<code>yp</code>	vertical percentage
<code>sp</code>	font size percentage
<code>type</code>	"bullet", "number" (list), "block", "code" (text)
<code>align</code>	"left", "middle", "end"
<code>color</code>	SVG names ("maroon"), or RGB "rgb(127,0,0)"
<code>opacity</code>	percent opacity (0-100, transparent - opaque)
<code>font</code>	"sans", "serif", "mono"
<code>link</code>	URL

Graphics Markup

```
<line xp1="5" yp1="75" xp2="20" yp2="70" sp="0.2"/>
```

```
<rect xp="10" yp="60" wp="15" hr="66.6" color="red"/>
```

```
<rect xp="15" yp="55" wp="10" hr="100" color="blue" opacity="30"/>
```

```
<ellipse xp="10" yp="35" wp="15" hr="66.66" color="green"/>
```

```
<ellipse xp="15" yp="30" wp="10" hr="100" color="blue" opacity="30"/>
```

```
<curve xp1="5" yp1="10" xp2="15" yp2="20" xp3="15" yp3="10" sp="0.3" color="red"/>
```

```
<arc xp="22" yp="10" wp="10" wp="10" a1="0" a2="180" sp="0.2" color="blue"/>
```

A blank percent grid with a 10x10 grid of squares. The horizontal axis is labeled 10, 20, 30, 40, 50, 60, 70, 80, 90. The vertical axis is labeled 10, 20, 30, 40, 50, 60, 70, 80, 90. The text "Percent Grid" is centered in the grid.

    }
    canvas.Gend()
    canvas.End()
}
```

Output

A few months ago, I had a look at the brainchild of a few serious heavyweights working at Google. Their project, the Go programming language, is a static typed, c lookalike, semicolon-less, self formatting, package managed, object oriented, easily parallelizable, cluster fuck of genius with an unique class inheritance system. It doesn't have one.

The Go Programming Language

is a static typed,
c lookalike,
semicolon-less,
self formatting,
package managed,
object oriented,
easily parallelizable,
cluster fuck of genius
with an unique class inheritance system.

The Go Programming Language

is a static typed,

cluster fuck of genius
with an unique class inheritance system.

The Go Programming Language

is a static typed, c lookalike, semicolon-less, self formatting,
package managed, object oriented, easily parallelizable,
cluster fuck of genius with an unique class inheritance system.

It doesn't have one.

So, the next time you're about to
make a subclass, think hard and ask
yourself

what would Go do

Andrew Mackenzie-Ross, <http://pocket.co/sSc56>

Python and Ruby programmers come to Go because they don't have to surrender much expressiveness, but gain performance and get to play with concurrency.

Less is exponentially more
Rob Pike

A dramatic sky scene with dark blue, textured clouds. A bright, glowing light source, possibly the sun or moon, is partially obscured by a cloud in the upper center, creating a strong backlight effect. The overall mood is contemplative and atmospheric.

You must not blame me if I do talk to the clouds.

FOR, LO,

the winter is past,

the rain is over and gone;

The flowers appear on the earth;

the time for the singing of birds is come,

and the voice of the turtle is heard in our land.

Good Design

is innovative

makes a product useful

is aesthetic

makes a product understandable

is unobtrusive

is honest

is long-lasting

is thorough down to the last detail

is environmentally-friendly

is as little design as possible
