

# Deck

a Go package for presentations

---

## DECK: a package for presentations

Deck is a package written in Go

That uses a singular markup language

With elements for text, lists, code, and graphics

All layout and sizes are expressed as percentages

Clients are interactive or create formats like PDF or SVG

Elements

# Hello, World

A block of text, word-wrapped to a specified width.  
You may specify size, font, color, and opacity.

```
package main

import "fmt"

func main() {
    fmt.Println("Hello, World")
}
```

<text>...</text>

bullet

- Point A
- Point B
- Point C
- Point D

plain

First item  
Second item  
The third item  
and the last thing

number

1. This  
2. That  
3. The other  
4. One more

```
<list>...</list>
```

height

width

```
<image ... />
```

height (relative  
to element  
or canvas  
width)

width

```
<rect ... />
```

height (relative  
to element  
or canvas  
width)

width

```
<ellipse ... />
```

`<line ... />`

angle2 (90 deg)

x, y   angle1 (0 deg)

A diagram illustrating an arc. A gray arc starts at a point labeled 'x, y' and ends at a point labeled 'angle1 (0 deg)'. The arc is labeled 'angle2 (90 deg)'.

<arc . . . />

`<curve ... />`

# Markup and Layout

Start the deck	<code>&lt;deck&gt;</code>
Set the canvas size	<code>&lt;canvas width="1024" height="768" /&gt;</code>
Begin a slide	<code>&lt;slide bg="white" fg="black"&gt;</code>
Place an image	<code>&lt;image xp="70" yp="60" width="256" height="179" name="work.png" caption="Desk"/&gt;</code>
Draw some text	<code>&lt;text xp="20" yp="80" sp="3"&gt;Deck uses these elements&lt;/text&gt;</code>
Make a bullet list	<code>&lt;list xp="20" yp="70" sp="2" type="bullet"&gt;</code> <code>&lt;li&gt;text, list, image&lt;/li&gt;</code> <code>&lt;li&gt;line, rect, ellipse&lt;/li&gt;</code> <code>&lt;li&gt;arc, curve&lt;/li&gt;</code>
End the list	<code>&lt;/list&gt;</code>
Draw a line	<code>&lt;line xp1="20" yp1="10" xp2="30" yp2="10"/&gt;</code>
Draw a rectangle	<code>&lt;rect xp="35" yp="10" wp="4" hr="75" color="rgb(127,0,0)"/&gt;</code>
Draw an ellipse	<code>&lt;ellipse xp="45" yp="10" wp="4" hr="75" color="rgb(0,127,0)"/&gt;</code>
Draw an arc	<code>&lt;arc xp="55" yp="10" wp="4" hp="3" a1="0" a2="180" color="rgb(0,0,127)"/&gt;</code>
Draw a quadratic bezier	<code>&lt;curve xp1="60" yp1="10" xp2="75" yp2="20" xp3="70" yp3="10" /&gt;</code>
End the slide	<code>&lt;/slide&gt;</code>
End of the deck	<code>&lt;/deck&gt;</code>

## Anatomy of a Deck

# Deck uses these elements

- text, list, image
- line, rect, ellipse
- arc, curve

Desk

# Text and List Markup

Position, size	<code>&lt;text xp="..." yp="..." sp="..."&gt;</code>
Block of text	<code>&lt;text ... type="block"&gt;</code>
Lines of code	<code>&lt;text ... type="code"&gt;</code>
Attributes	<code>&lt;text ... color="..." opacity="..." font="..." align="..."&gt;</code>
<hr/>	
Position, size	<code>&lt;list xp="..." yp="..." sp="..."&gt;</code>
Bullet list	<code>&lt;list ... type="bullet"&gt;</code>
Numbered list	<code>&lt;list ... type="number"&gt;</code>
Attributes	<code>&lt;list ... color="..." opacity="..." font="..." align="..."&gt;</code>

# Common Attributes for text and list

<code>xp</code>	horizontal percentage
<code>yp</code>	vertical percentage
<code>sp</code>	font size percentage
<code>type</code>	"bullet", "number" (list), "block", "code" (text)
<code>align</code>	"left", "middle", "end"
<code>color</code>	SVG names ("maroon"), or RGB "rgb(127,0,0)"
<code>opacity</code>	percent opacity (0-100, transparent - opaque)
<code>font</code>	"sans", "serif", "mono"

# Graphics Markup

```
<line xp1="5" yp1="75" xp2="20" yp2="70" sp="0.2"/>
```

```
<rect xp="10" yp="60" wp="15" hr="66.6" color="red"/>
```

```
<rect xp="15" yp="55" wp="10" hr="100" color="blue" opacity="30"/>
```

```
<ellipse xp="10" yp="35" wp="15" hr="66.66" color="green"/>
```

```
<ellipse xp="15" yp="30" wp="10" hr="100" color="blue" opacity="30"/>
```

```
<curve xp1="5" yp1="10" xp2="15" yp2="20" xp3="15" yp3="10" sp="0.3" color="red"/>
```

```
<arc xp="22" yp="10" wp="10" wp="10" a1="0" a2="180" sp="0.2" color="blue"/>
```

A Percent Grid with a 10x10 grid of squares. The horizontal axis is labeled 10, 20, 30, 40, 50, 60, 70, 80, 90. The vertical axis is labeled 10, 20, 30, 40, 50, 60, 70, 80, 90. The text "Percent Grid" is centered in the grid.

Rocks

This is not a notecard

A few months ago, I had a look at the brainchild of a few serious heavyweights working at Google. Their project, the Go programming language, is a static typed, c lookalike, semicolon-less, self formatting, package managed, object oriented, easily paralellizable, cluster fuck of genius with an unique class inheritance system. It doesn't have one.

# The Go Programming Language

is a static typed,  
c lookalike,  
semicolon-less,  
self formatting,  
package managed,  
object oriented,  
easily paralellizable,  
cluster fuck of genius  
with an unique class inheritance system.

# The Go Programming Language

is a static typed, c lookalike, semicolon-less, self formatting,  
package managed, object oriented, easily paralellizable,  
cluster fuck of genius with an unique class inheritance system.

It doesn't have one.

So, the next time you're about to make  
a subclass, think hard and ask yourself

what would Go do

Andrew Mackenzie-Ross, <http://pocket.co/sSc56>

Deck is heavenly

FOR, LO,

the winter is past,

the rain is over and gone;

The flowers appear on the earth;

the time for the singing of birds is come,

and the voice of the turtle is heard in our land.

Clients

```

package main

import (
    "log"
    "github.com/ajstarks/deck"
)

func main() {
    presentation, err := deck.Read("deck.xml", 1024, 768) // open the deck
    if err != nil {
        log.Fatal(err)
    }
    for _, slide := range presentation.Slide {           // for every slide...
        for _, t := range slide.Text {                  // process the text elements
            x, y, size := deck.Dimen(presentation.Canvas, t.Xp, t.Yp, t.Sp)
            slideText(x, y, size, t)
        }
        for _, l := range slide.List {                  // process the list elements
            x, y, size := deck.Dimen(presentation.Canvas, l.Xp, l.Yp, l.Sp)
            slideList(x, y, size, l)
        }
    }
}
