Deck

DECK: a package for presentations

Deck is a package written in Go

That uses a singular markup language

With elements for text, lists, code, and graphics

All layout and sizes are expressed as percentages

Clients are interactive or create formats like PDF or SVG

Elements

Hello, World

A block of text, word-wrapped to a specified width. You may specify size, font, color, and opacity.

```go
package main
import "fmt"
func main() {
    fmt.Println("Hello, World")
}
```

...

| bullet	plain	number
• Point A	First item	1. This
• Point B	Second item	2. That
• Point C	The third item	3. The other
• Point D	the last thing	4. One more

Markup and Layout

|	
Start the deck	`<deck>`
Set the canvas size	`<canvas width="1024" height="768" />`
Begin a slide	`<slide bg="white" fg="black">`
Place an image	`<image xp="70" yp="60" width="256" height="179" name="work.png" caption="Desk"/>`
Draw some text	`<text  xp="20" yp="80" sp="3">Deck uses these elements</text>`
Make a bullet list	`<list  xp="20" yp="70" sp="2" type="bullet">`
	`<li>text, list, image</li>`
	`<li>line, rect, ellipse</li>`
	`<li>arc, curve</li>`
End the list	`</list>`
Draw a line	`<line    xp1="20" yp1="10" xp2="30" yp2="10"/>`
Draw a rectangle	`<rect    xp="35"  yp="10" wp="4" hr="75" color="rgb(127,0,0)"/>`
Draw an ellipse	`<ellipse xp="45"  yp="10" wp="4" hr="75" color="rgb(0,127,0)"/>`
Draw an arc	`<arc     xp="55"  yp="10" wp="4" hp="3" a1="0" a2="180" color="rgb(0,0,127)"/>`
Draw a quadratic bezier	`<curve   xp1="60" yp1="10" xp2="75" yp2="20" xp3="70" yp3="10" />`
End the slide	`</slide>`
End of the deck	`</deck>`

Anatomy of a Deck

Deck uses these elements

- text, list, image

- line, rect, ellipse

- arc, curve

Desk
Text and List Markup

Position, size   `<text xp="..." yp="..." sp="...">`

Block of text   `<text ... type="block">`

Lines of code   `<text ... type="code">`

Attributes   `<text ... color="..." opacity="..." font="..." align="...">`

Position, size   `<list xp="..." yp="..." sp="...">`

Bullet list   `<list ... type="bullet">`

Numbered list   `<list ... type="number">`

Attributes   `<list ... color="..." opacity="..." font="..." align="...">`

Common Attributes for text and list

`xp`	horizontal percentage
`yp`	vertical percentage
`sp`	font size percentage
`type`	"bullet", "number" (list), "block", "code" (text)
`align`	"left", "middle", "end"
`color`	SVG names ("maroon"), or RGB "rgb(127,0,0)"
`opacity`	percent opacity (0-100, transparent - opaque)
`font`	"sans", "serif", "mono"

Graphics Markup

```
<line xp1="5" yp1="75" xp2="20" yp2="70" sp="0.2"/>
```

```
<rect xp="10" yp="60" wp="15" hr="66.6" color="red"/>
```
```
<rect xp="15" yp="55" wp="10" hr="100" color="blue" opacity="30"/>
```

```
<ellipse xp="10" yp="35" wp="15" hr="66.66" color="green"/>
```

```
<ellipse xp="15" yp="30" wp="10" hr="100" color="blue" opacity="30"/>
```
```
<curve xp1="5" yp1="10" xp2="15" yp2="20" xp3="15" yp3="10" sp="0.3" color="red"/>
```

```
<arc xp="22" yp="10" wp="10" wp="10" a1="0" a2="180" sp="0.2" color="blue"/>
```

Percent Grid

10%, 50%

50%, 50%

90%, 50%

Hello

Percentage-based layout

bullet	plain	number
• Point A	First item	1. This

`<list>...</list>`

Clients

```go
package main
import (
    "log"
    "github.com/ajstarks/deck"
)
func main() {
    presentation, err := deck.Read("deck.xml", 1024, 768) // open the deck
    if err != nil {
        log.Fatal(err)
    }
    for _, slide := range presentation.Slide {          // for every slide...
        for _, t := range slide.Text {                  // process the text elements
            x, y, size := deck.Dimen(presentation.Canvas, t.Xp, t.Yp, t.Sp)
            slideText(x, y, size, t)
        }
        for _, l := range slide.List {                  // process the list elements
            x, y, size := deck.Dimen(presentation.Canvas, l.Xp, l.Yp, l.Sp)
            slideList(x, y, size, l)
        }
    }
}

pdfdeck [options] file.xml...

-sans, -serif, -mono [font] specify fonts

-pagesize [w,h, or Letter, Legal, Tabloid, A2-A5, ArchA, Index, 4R, Widescreen]

-stdout (output to standard out)

-outdir [directory] directory for PDF output

-fontdir [directory] directory containing font information

-author [author name] set the document author

-title [title text] set the document title

-grid [percent] draw a percent grid on each slide

svgdeck [options] file.xml...

-sans, -serif, -mono [font] specify fonts

-pagesize [Letter, Legal, A3, A4, A5]

-pagewidth [canvas width]

-pageheight [canvas height]

-stdout (output to standard out)

-outdir [directory] directory for PDF output

-title [title text] set the document title

-grid [percent] draw a percent grid on each slide

vgdeck [options] file.xml...

-loop [duration] loop, pausing [duration] between slides

-slide [number] start at slide number

-w [width] canvas width

-h [height] canvas height

-g [percent] draw a percent grid

vgdeck Commands

+, Ctrl-N, [Return]   Next slide

-, Ctrl-P, [Backspace]   Previous slide

^, Ctrl-A   First slide

$, Ctrl-E   Last slide

r, Ctrl-R   Reload

x, Ctrl-X   X-Ray

/, Ctrl-F [text]   Search

s, Ctrl-S   Save

q   Quit

Deck Web API

GET	/	List the API
GET	/deck/	List the content on the server
GET	/deck/?filter=[type]	List content filtered by deck, image, video
POST	/deck/content.xml?cmd=1s	Play a deck with the specified duration
POST	/deck/content.xml?cmd=stop	Stop playing a deck
POST	/deck/content.xml?slide=[num]	Play deck starting at a slide number
DELETE	/deck/content.xml	Remove content
POST	/upload/ Deck:content.xml	Upload content
POST	/table/ Deck:content.txt	Generate a table from a tab-separated list
POST	/table/?textsize=[size]	Specify the text size of the table
POST	/media/ Media:content.mov	Play the specified video

deck [command] [argument]

deck play file   Play a deck

deck stop   Stop playing a deck

deck list [deck|image|video]   List contents

deck upload file...   Upload content

deck remove file...   Remove content

        canvas.Text(0, 0, "i", canvas.RGBA(255, 255, 255, a))
        canvas.Gend()
        a -= ai
    }
    canvas.Gend()
    canvas.End()
}
```

Output
A few months ago, I had a look at the brainchild of
a few serious heavyweights working at Google. Their
project, the Go programming language, is a static
typed, c lookalike, semicolon-less, self formatting,
package managed, object oriented, easily parallelizable,
cluster fuck of genius with an unique class inheritance
system. It doesn't have one.

The Go Programming Language

is a static typed,

c lookalike,

semicolon-less,

self formatting,

package managed,

object oriented,

easily parallelizable,

cluster fuck of genius

with an unique class inheritance system.

with an unique class inheritance system.

The Go Programming Language

is a static typed, c lookalike, semicolon-less, self formatting,

package managed, object oriented, easily parallelizable,

cluster fuck of genius with an unique class inheritance system.

It doesn't have one.

So, the next time you're about
to make a subclass, think hard
and ask yourself

what would Go do

Python and Ruby programmers come to Go because they don't have to surrender much expressiveness, but gain performance and get to play with concurrency.

Less is exponentially more
Rob Pike

You must not blame me if I do talk to the clouds.

FOR, LO,

the winter is past,
the rain is over and gone;
The flowers appear on the earth;
the time for the singing of birds is come,
and the voice of the turtle is heard in our land.

Song of Solomon 2:11-12
